

Individual Submissions Individual Reflections (Insufficient examples)

Reflection A, Prompt Engineer (too short and not role aligned)

AI helped us import the file quickly. We used read_csv and it worked. This assignment was helpful.

Reflection B, Statistical Auditor (does not audit, no evidence)

I checked the AI answer and it seemed correct. Missing values and dates are important. We should always check summary.

Reflection C, Synthesizer (generic, no learning, too short)

I made the slides and wrote the summary. Importing data is the first step. AI made it easier.

Why these reflections fail

1. They are far below the 150 to 200 word requirement
2. They do not describe what AI missed or oversimplified
3. They do not describe specific contributions tied to each role
4. They provide no evidence of learning from the dataset
